Regression with Both Quantitative and Qualitative Predictors

## Multiple Linear Regression

$Y=\beta_{0}+\beta_{1} X_{1}+\beta_{2} X_{2}+\cdots+\beta_{p-1} X_{p-1}+\varepsilon, \quad \varepsilon \sim \mathrm{N}\left(0, \sigma^{2}\right)$
$X_{1}, X_{2}, \cdots, X_{p-1}$ are the predictors.
Question: What if some of the predictors are qualitative (categorical) variables?
$\Rightarrow$ We will need to create dummy (indicator) variables for those categorical variables

Example: We can encode Gender into 1 (Female) and 0 (Male)

The 2008-09 nine-month academic salary for Assistant Professors, Associate Professors and Professors in a college in the U.S. The data were collected as part of the on-going effort of the college's administration to monitor salary differences between male and female faculty members.

Predictors

We have three categorical variables, namely, rank, discipline, and sex.

## Dummy Variable

For binary categorical variables:

$$
\begin{gathered}
X_{\text {sex }}= \begin{cases}1 & \text { if sex = male } \\
0 & \text { if sex }=\text { female }\end{cases} \\
X_{\text {discip }}= \begin{cases}0 & \text { if discip }=\mathrm{A}, \\
1 & \text { if discip }=\mathrm{B} .\end{cases}
\end{gathered}
$$

For categorical variable with more than two categories:

$$
\begin{aligned}
& X_{\text {rank } 1}= \begin{cases}0 & \text { if rank }=\text { Assistant Prof }, \\
1 & \text { if rank }=\text { Associated Prof. }\end{cases} \\
& X_{\text {rank 2 }}= \begin{cases}0 & \text { if rank }=\text { Associated Prof }, \\
1 & \text { if rank }=\text { Full Prof. }\end{cases}
\end{aligned}
$$

Polynomial Regression
Suppose we would like to model the relationship between response $Y$ and a predictor $X$ as a $p_{\text {th }}$ degree polynomial in $X$ :

$$
Y_{i}=\beta_{0}+\beta_{1} X_{i}+\beta_{2} X_{i}^{2}+\cdots+\beta_{p} X_{i}^{p}+\varepsilon
$$

We can treat polynomial regression as a special case of multiple linear regression. In specific, the design matrix takes the following form:

$$
\boldsymbol{X}=\left(\begin{array}{ccccc}
1 & X_{1} & X_{1}^{2} & \cdots & X_{1}^{p} \\
1 & X_{2} & X_{2}^{2} & \cdots & X_{2}^{p} \\
\vdots & \cdots & \ddots & \vdots & \vdots \\
1 & X_{n} & X_{n}^{2} & \cdots & X_{n}^{p}
\end{array}\right)
$$
